**Re: NOTIFICATION OF ENERGY DEVELOPMENT PROJECT -  
PROPOSED NEW LOCATION – WATER DISPOSAL  
WELL NAME(S): PROGRESS GOLDCK 7-25-69-6**

---

In accordance with the AER industry disclosure requirements, notification is being hereby provided with regard to the following energy development project. You are receiving this Notice as you have been identified as an operator of a similar facility or a licensee of an unconnected well in the vicinity of the project.

Dragos Energy proposes to recomplete one existing vertical disposal well from a single well surface lease. The surface location and wellbore already exist and will simply be recompleted for the purpose of 'Class II' fluid disposal.

In the event that the well is successful, a disposal facility will be licensed and constructed for ongoing injection purposes. Injection facilities on site will be similar to other disposal facilities in the area and may include surface pumping equipment, filtering equipment, and various storage vessels.

This notice is being provided to you pursuant to AER requirements. Should you require further information or clarification regarding this or any other proposed development, please contact Dragos Energy at the number listed below.
